

14. Write C programs that demonstrate the mathematical analysis of non-recursive and recursive algorithms.

Program:

```
def factorial_non_recursive(n):
```

```
    """
```

```
    Non-recursive algorithm to compute the factorial of a
    number.
```

```
    """
```

```
    result = 1
```

```
    for i in range(1, n + 1):
```

```
        result *= i
```

```
    return result
```

```
# Example usage
```

```
number = 5
```

```
print("Factorial of", number, "using non-recursive
algorithm:", factorial_non_recursive(number))
```

```
def factorial_recursive(n):
```

```
    """
```

```
    Recursive algorithm to compute the factorial of a
    number.
```

```
    """
```

```
    if n == 0 or n == 1:
```

```
        return 1
```

```
    else:
```

```
        return n * factorial_recursive(n - 1)
```

```
# Example usage
```

```
number = 5
```

```
print("Factorial of", number, "using recursive
algorithm:", factorial_recursive(number))
```

Output:

```
"C:\Program Files\Python312\python.exe" "C:\Work Space\DAA COADS.PYTHON\program 14.py"  
Factorial of 5 using non-recursive algorithm: 120  
Factorial of 5 using recursive algorithm: 120  
  
Process finished with exit code 0
```

Time complexity:

$O(n)$ for non-recursive algorithm

$O(n)$ for recursive algorithm
